Krone was founded in Spelle, Germany, in 1906 with the intention of making farming more efficient and profitable. Following many years of growth and expansion, Krone North America was established in 1973 and continues to further that vision by supplying innovative, performance-engineered equipment that has become the benchmark in the hay and forage industry. Because hay and forage equipment is all we do—not an afterthought—we understand our customers. We know that they understand their business better than anyone. So, when we set out to design equipment that meets the unique needs of our customers better than any other company in the industry, we start by asking them what they need. As a privately held company, we can do that because we don't

answer to shareholders—we answer to our customers.
