Molinos AFAU, s. l.

*Molinos AFAU – Dutch Dryers is a proud sponsor  
of the World Alfalfa Congress.*

## Molinos AFAU

At Molinos AFAU we are specialists in industrial processes of crushing, dehydration, grinding and densification. From the beginning, quality was the only valid tool for the future, and following this line, commercial agreements were signed with the best world manufacturers in each sector.

The knowledge and experiences acquired during these years have allowed us to continue developing our activity as a supplier of facilities for the manufacture of feed, fodder and straw processing, biomass and compost treatment, and solid waste recycling systems. Little by little, Molinos AFAU has become the reference company for any crushing, drying, grinding and densification process.

More than 30 years ago, Molinos AFAU began its activity as a manufacturer of equipment for small feed mills. Shortly after, work began on forage processing facilities, with the manufacture of mills and dryers.

Currently, our facilities, located in Pina de Ebro, Zaragoza, occupy a total of 10,000 m<sup>2</sup>, of which almost 5,000 m<sup>2</sup> are industrial warehouses for

manufacturing, workshop assembly and spare parts storage, and 400 m2 for offices that They house the Administration, Technical-Commercial and Technical Office departments.

The main activity of our company consists of the development of complete installation projects, including: process design, preparation of installation and machinery plans, supply of machines, manufacturing in our workshops, assembly and commissioning.

### Dutch Dryers

Dutch Dryers. That's been our name since 2007. For clients throughout the world that's a name of great significance. We are a Dutch company that is specialised in: development, building and maintenance of thermal drying systems. Our team has many years of experience in this field. We started out specialising in making drum dryers but now we also produce belt dryers - a unique combination of expertise that allows us to work with you to develop the very best thermal drying system. We are based in Zeist, which is located centrally in the Netherlands and where our engineers develop the latest generation of systems. But we'll be pleased to visit you –

wherever you may be in the world – to discuss your project and to commission and maintain our solutions.

Discover the power of Dutch Dryers!

- Specialised in effective systems for organic waste flows that are difficult to dry, such as natural materials with long fibres or sludge with high moisture content.
- Supplier of drum dryers and belt dryers.
- Innovative and pragmatic; we enjoy working with our clients to develop new solutions for new applications. Your partner – from pilot project to process optimisation.
